

NANOBOLIC

HIGHEST PERFORMANCE NANO BCAA

'This Product has been Scientifically Proven to be Performance Enhancing'

- First Nanorised Amino Acid Formula and BCAA's
- Rapid Absorption
- Easy Mixing - no Lumps!
- Scientifically Proven
- HPLC Tested
- 80% NANO BCAA's including 32% NANO Leucine
- Anabolic Nitrogen Retention
- Increase Performance, Recovery + Muscle Growth

"THE FIRST REAL NANO AMINO ACID / BCAA SUPPLEMENT!"

"The Most Advanced BCAA formula that has ever been Developed"

ASN Advanced Sports Nutrition's NANObolic sets a new standard in BCAA formulas. This revolutionary product brings you the first nanorised Amino Acids for ultra rapid absorption plus other intermediates which complement genetic pathways leading to rapid muscle growth!

The perfect addition to a high-protein diet, using this formula can help improve your athletic performance and physique, safely and effectively. It was used by Soviet and Russian sportsmen in order to upgrade psychological and physical reserves that were exhausted due to hard training. After regular intake of the formula, the muscle component in the body increases while the fat tissues are depleted.

For body builders and other athletes, a stronger and more powerful body is the holy grail. To this end, enter NANObolic which just may possess the

power to turn the sports world on its ear. In Russia and Eastern European countries, the formula is regularly used in conjunction with Siberian ginseng and Rhodiola, to improve all parameters of sports performance. What makes the formula so special is that it appears to be a true anabolic agent, enabling the body to produce more lean muscle mass. This is good news for athletes who might otherwise be lured by steroids. Modern research conducted in Russia and Eastern Europe indicates that the formula used in NANObolic may indeed exert a beneficial effect in cases of impotence, improve memory and learning, increase working capacity of tired skeletal muscles and possess anabolic and adaptogenic properties.

This formula may improve overall physical performance, and shorten recovery time after an intense workout. Observations of the influence on the cardiovascular system have shown that its ability to increase physical work capacity is partially due to its ability to improve food supply to the muscles and brain.

In athletes who use the formula regularly, it may demonstrate a marked anabolic effect, and aids the body in the synthesis of protein. The formula, may also protect the body from environmental stress. It is prescribed to athletes by Russian sports physicians in order to replenish depleted physical and psychological reserves that become exhausted as a result of hard training. After taking the formula, an increase in muscle mass and a decrease in fat tissue may be seen.

The formula may help:

- Increase the rate at which ATP (source of energy in cells) is restored;
- Contribute to an increase of muscle mass;
- Reinforce contractions of the heart muscles;
- Improve blood circulation in muscles and brain;
- Increase resistance to oxygen starvation;
- Elevate the ability and mobility of spermatozooids in vitro;
- Accelerate sexual maturity and the first pregnancy of female animals;
- Prevent development of experimental hyper and hypoglycemia, leukocytosis, leucopenia, erythrocytosis and erythropenia;
- Restore the capacity to focus, concentrate and perform mental work in men while mentally fatigued;
- Increase the resistance to the common cold;

In addition, the formula in NANObolic may have the ability to prevent and eliminate stress-induced pathological conditions, especially during their initial stages. In particular, it may improve the focus and attention in persons whose duties require great concentration (such as traffic controllers, pilots and astronauts). The extract may help prevent stress-induced sleep disorders and does not evoke an unpleasant sensations such as psychosis, retardation, sluggish distress, apathy and headaches, which were observed following the intake of sleeping pills. The formula may also have a positive influence on the initial stages asthenia and sexual malfunction. It may slightly decrease blood sugar during the initial stage of diabetes mellitus.

The formula in NANOabolic may also:

- Possess anabolic activity - the ability to increase muscle mass - while not destroying androgen function (in contrast to the well-known anabolic steroids);
- Stimulate RNA synthesis in liver cells (thereby increasing protein synthesis);
- Activate brain synthesis of glutamate decarboxylase (an enzyme which is responsible for synthesis of gamma-aminobutyric acid, an inhibitory neurotransmitter in the brain);
- Activate the brain synthesis of acetylcholine esterase (an enzyme which participates in regulation of nerve impulse transmission in cholinergic neurons);
- Activate synthesis of decarboxylase (an enzyme participating in formation of adrenaline);
- Activate synthesis catalase (an enzyme that destroys H₂O₂, which can damage DNA and cellular membranes);
- Activate synthesis of glucose dehydrogenase, acid phosphatase and malate dehydrogenase (enzymes which take part in cell energy generation);
- Protect nuclear chromatin in chromosome component) in liver cells against free radical oxidation induced by tetrachloromethane in experimental animals, thus significantly increasing their survival;
- Provide protective action experimental arteriosclerosis in rabbits;
- Restore phospholipids of liver mitochondria pathologically changed by insulin insufficiency under experimental alloxan diabetes mellitus in animals;
- Eliminate experimental arrhythmia and improves heart contractility during coronary artery occlusion in animals;
- Have an immunomodulating effect on lymphocyte production by the spleen;

The mechanism behind the actions of the formula in NANOabolic is probably similar to that of human steroid hormones. This means that hormone receptors on human cells interact with the active ingredients in the NANOabolic formula.

BCAA's have been scientifically proven to play a part in muscle development with the branch chain amino acid L-Leucine being linked to a genetic pathway which regulates muscle growth. Using NANO Technology, we are now able to provide rapidly absorbed materials to ramp up anabolic levels to that which rival their banned counterparts. Until now this was not possible.

A lot of time and research has gone into developing this product. Countless hours of going over the research on all the ingredients, how they interact with each other and how they would interact with other ASN Advanced Sports Nutrition NANO Technology products such as Xtreme Pump, HP-100, Humanofort and Tribestanol. We can guarantee you won't be disappointed with the results. With NANO Technology we can truly develop products that will outperform outdated 'old school' anabolics and enter the new age of genetic altering NANO materials. "Bigger, stronger, faster is just a NANOabolic step away!"

Description: NANObolic is a potent blend of ultra fast, rapidly absorbed NANO amino acids comprising of 80% BCAA's in which 32% is made up of L-Leucine. Other co-factors have also been added to the formula to enhance cellular responses, elevating the body into an anabolic state. This formula is a non-hormonal anabolic supplement. The NANObolic formula ingredients are not listed on the 2009 WADA Banned substances list and is therefore legal to use in all sports!

Genetic Mechanism: NANObolic works by increasing nitrogen retention and increasing protein synthesis at the cellular level (for this reason we strongly recommend that you increase your daily dietary intake of protein while using this product). It has been scientifically proven, without a doubt, that increased nitrogen retention and resistance training will stimulate muscle growth and burn fat as much as 20 times more effective than with no exercise and only an increase in nitrogen retention caused by supplementing with NANObolic. However, it can be noted that nitrogen retention retained by using NANObolic may assist with maintaining muscle mass while on a calorie restricting diet.

Pregnancy: NANObolic should be avoided in pregnancy.

Nursing Mothers: NANObolic should be avoided in nursing mothers

Storage: Keep container tightly closed, and out of reach of children. NANObolic should be stored at below 30°C (86°F) and away from excess heat and moisture (not in the bathroom). Keep away from light.

Use: This advanced NANO technology formula product is essential for any sports person wishing to improve their performance and may also be useful to a bodybuilding or fitness athlete during dieting for a competition. With constant use, the properties of this formula may help stimulate cellular regeneration, which may also lead to maturation of stem cells involved in developing lean muscle mass. Use during training for an added boost, after training for recovery and at any time during the day to keep the body elevated in an anabolic state.

Nutrition Information

Servings per package: 80 Serving size: 1 scoop (3g)

	Per Serving 3g	Per 100g
Energy	50kj (12Cal)	1670 (400Cal)
Protein	1.7g	55.4g
Fat, Total	less than 0.1g	1.7g
-Saturated	less than 0.1g	0.6g
Carbohydrate	1.2g	39.3g
-Sugars	less than 0.1g	0.5g
Sodium	14mg	455mg

Highest Performance NANO BCAA

Ingredients: Leucine, Isoleucine, Valine, Aspartic Acid, Lysine, Phenylalanine, Taurine, Tyrosine, Threonine, Methionine, Citric Acid, Natural & Artificial Grape Flavours, Sodium Citrate, Rhodiola Rosera, Sucralose, Cyanotis Vaga, Vitamin B6

Recommended Use: Add 1 Serve (3g) to 200g of water or juice. Mix well using a shaker & consume.

For best results use 1-2 serves during the training section & 1-2 serves after training.

WARNING: KEEP OUT OF REACH OF CHILDREN

NOT TO BE USED BY CHILDREN UNDER THE AGE OF 15.

Store below 30c

**"BIGGER, STRONGER, FASTER
IS JUST A NANOBOLIC STEP AWAY!"**
